

1 Big O

Big O Additional Problems:

- 1.1 $O(b)$
- 1.2 $O(b)$
- 1.3 $O(1)$
- 1.4 $O(\frac{a}{b})$
- 1.5 $O(\log_2(n))$
- 1.6 $O(\sqrt[n]{n})$
- 1.7 $O(n)$ in the case that each node has 1 child in the same direction (degenerate tree).
- 1.8 $O(n)$, as you have no heuristics on where the node is located
- 1.9 $O(n^2)$ as each copy is $1 + 2 + 3 + \dots + n - 1 \leq n(n) \in O(n^2)$
- 1.10 $O(\log_1 0(n))$, which is equivalent to $O(\log_2(n))$ (up to a constant factor for change of base)
- 1.11 Checking if is in order takes $O(s)$ in size of string s , otherwise makes successive calls to every possible string with c^s possibilities, so $O(s * c^s)$
- 1.12 Total is $O(b \log b)$ for mergesort + $a \log b$ for binary searching b for each int in a . So, $O((a + b) \log b)$.

2 Arrays & Strings

Chapter 1: Arrays & Strings Interview Questions

1.1

Algorithm 1: IsUnique

<pre>1 arr = zeros(26); 2 for char c in string do 3 if arr[int(c)] == 0 then 4 arr[int(c)] += 1; 5 else 6 Return False 7 Return True</pre>
--

1.2

Algorithm 2: IsPermutation

<pre>1 if len(string1) != len(string2) then 2 Return False; 3 arr = zeros(26); 4 for char c in string1 do 5 arr[int(c)] += 1; 6 for char c in string2 do 7 arr[int(c)] -= 1; 8 for int i = 0; i < 26; ++i do 9 if arr[i] != 0 then 10 Return False; 11 Return True;</pre>
--
